DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 4-6, 7, and 10-16, drawn to a combination of a pharmaceutical device (an aerosol sprayer) and a pharmaceutical peptide, classified in class 128, subclass 200.14.
- II. Claims 2, 3, 8 and 9, drawn to a pharmaceutical peptide, classified in class 514, subclass 12.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination, a Y2 receptor binding compound, i.e., peptide YY, is known in the art, as disclosed in Applicants' IDS of January 19, 2005. See, e.g., Okada et al. ("Peripherally not centrally administered peptide YY (PYY) decreases high fat diet intake," *Endocrinology*, Abstract 520B, June 9, 1993), Abstract; and Grandt et al. ("Novel generation of hormone receptor specificity by amino terminal processing of peptide YY," *Biochem Biophys Res Comm* 186(3):1299-1306, 1992), Abstract and pp. 1304-1305. Also, the subcombination has separate utility, for example, as a weight-loss drug, and may be administered other than by an aerosol spray, such as intravenously. Therefore, these inventions are patentably distinct.

Additionally, the searches for any one group are not required for and are not coextensive with the searches for any other group, thereby creating an undue burden of search and examination. The results from a search of each of these groups have different considerations with respect to the prior art. Burden lies not only in the search of U.S. patents, but also in the search for literature and foreign patents and in examination of the claim language and specification for compliance with the statutes concerning new matter, distinctness, written description and enablement. Further, the different groups have each acquired a separate status in the art, as shown in part by their different classifications.

Because these inventions are distinct for the reasons given above, restriction for examination purposes as indicated is clearly proper.

Applicants should note that claims 3 and 7, which depend from claims 2 and 8, respectively, are drawn to an aqueous solution, which lacks antecedent basis in claims 2 and 8. Additionally, Applicants are requested to check their claim dependencies, e.g., in claims 6, 12 and 13.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
